

The List of Plugins Compatible with WordPress 5.0 (Gutenberg)

WordPress 5.0 rolled out on December 6, 2018. It's a major update with significant design and functional changes, such as the new blocks-based **Gutenberg Editor**. On this occasion, many WordPress users might be concerned whether they should stick to this update right now, as you can never be sure that all the plugins are compatible and you won't break something on your website by **updating WordPress**.

From our part, we understand your concern and consider it our duty to inform you that most of our **plugins** are fully compatible with the **latest WordPress release**. The full list of plugins that are safe to be used with WordPress 5.0 is as follows:

- Captcha
- Contact Form
- Contact Form Multi
- Contact Form to DB

Our developers are doing their best to ensure the **compatibility** of the rest of our plugins, so this list is being constantly updated.

Don't forget to stick to the recommendations we gave you on what you should do when WordPress releases a new version to make the update process run smoothly.

Feel free to contact us, if you have any questions.
